

# List of Bugs:

## Bug 1:

Iphone 6 32gb

\$790 \*includes tax

**Product description**

It comes with 1GB of RAM. The phone packs 16GB of internal storage cannot be expanded. As far as the cameras are concerned, the Apple iPhone 6 packs a 8-megapixel primary camera on the rear and a 1.2-megapixel front shooter for selfies.

Add to cart

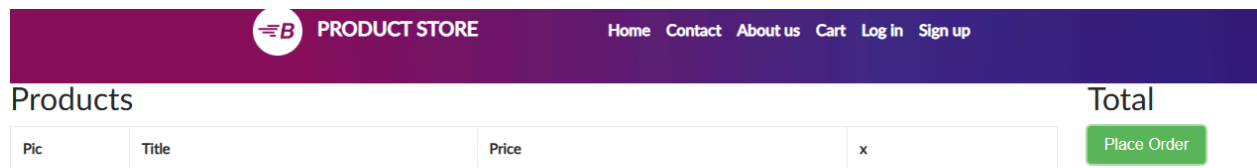

- a) Incorrect iPhone branding. Need to be “iPhone” instead of “Iphone”
- b) Product description of iPhone 6 does not match with that of its heading display. Description says **16GB** but heading says **32GB**.
- c) The storage capacity of the phone should always be denoted as “GB” and not “gb”

**Adjustment:** Meeting with Product owner and properly communicate regarding the anomalies to be updated in the BRD (Business Requirement Document).

## Bug 2:

Actual Behaviour: When the cart is empty and “Place Order” button is enabled.

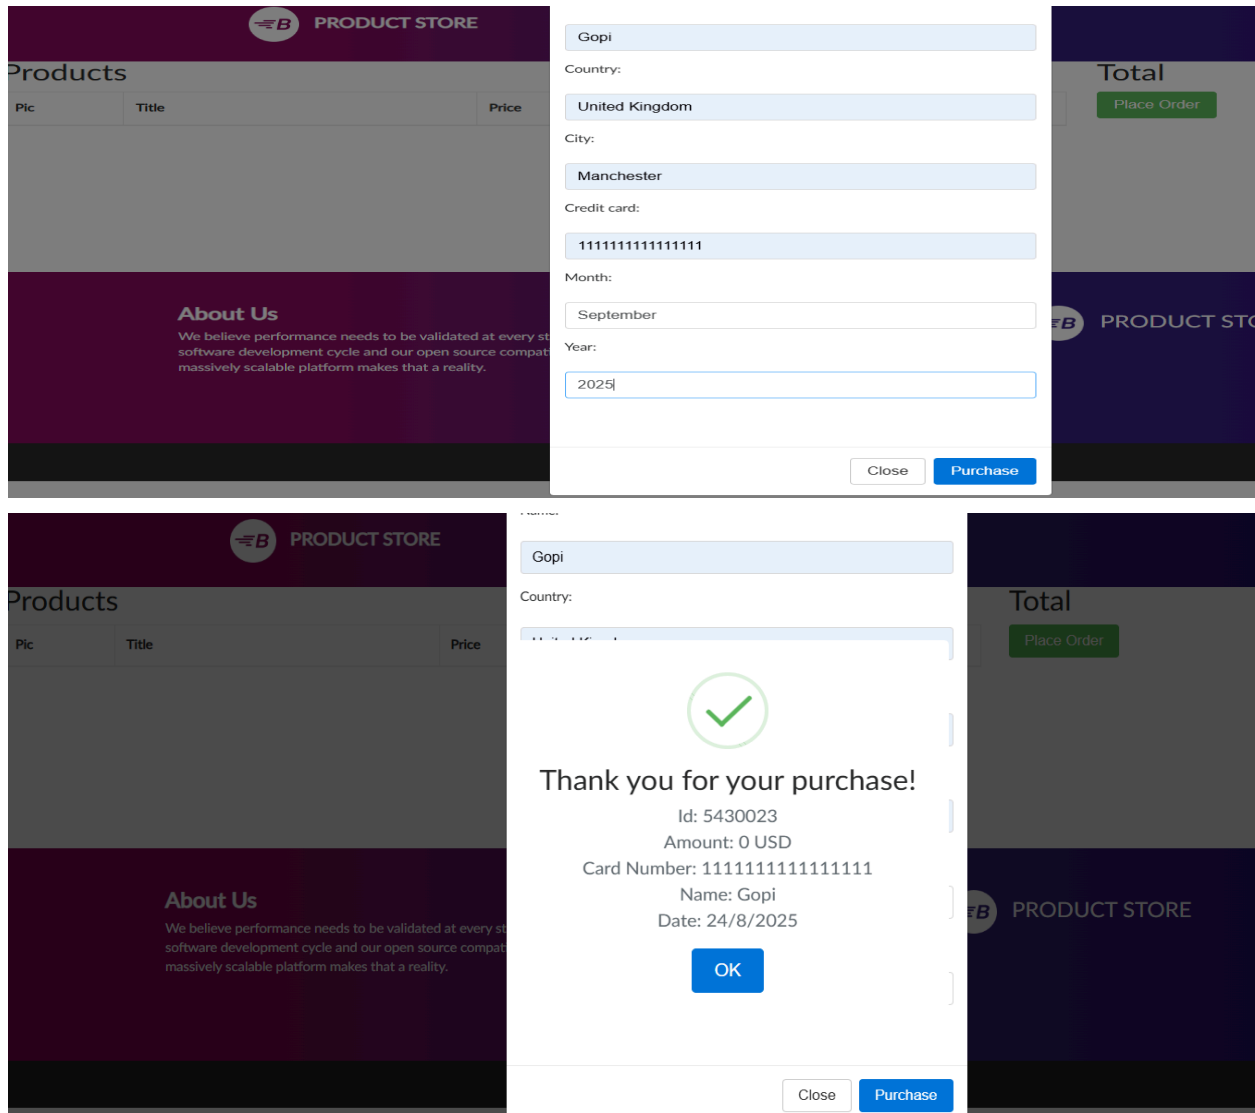

Expected Behaviour: “Place Order” should only be enabled when a product item is added to the cart.

**Adjustment:** A bug need to raised and fixed by the development team. Once the bug is fixed, the functionality should be retest and regressed with the module.

## Bug 3:

“Place Order” still functional and shows successful purchase even after cart is empty and no product been added to the cart.

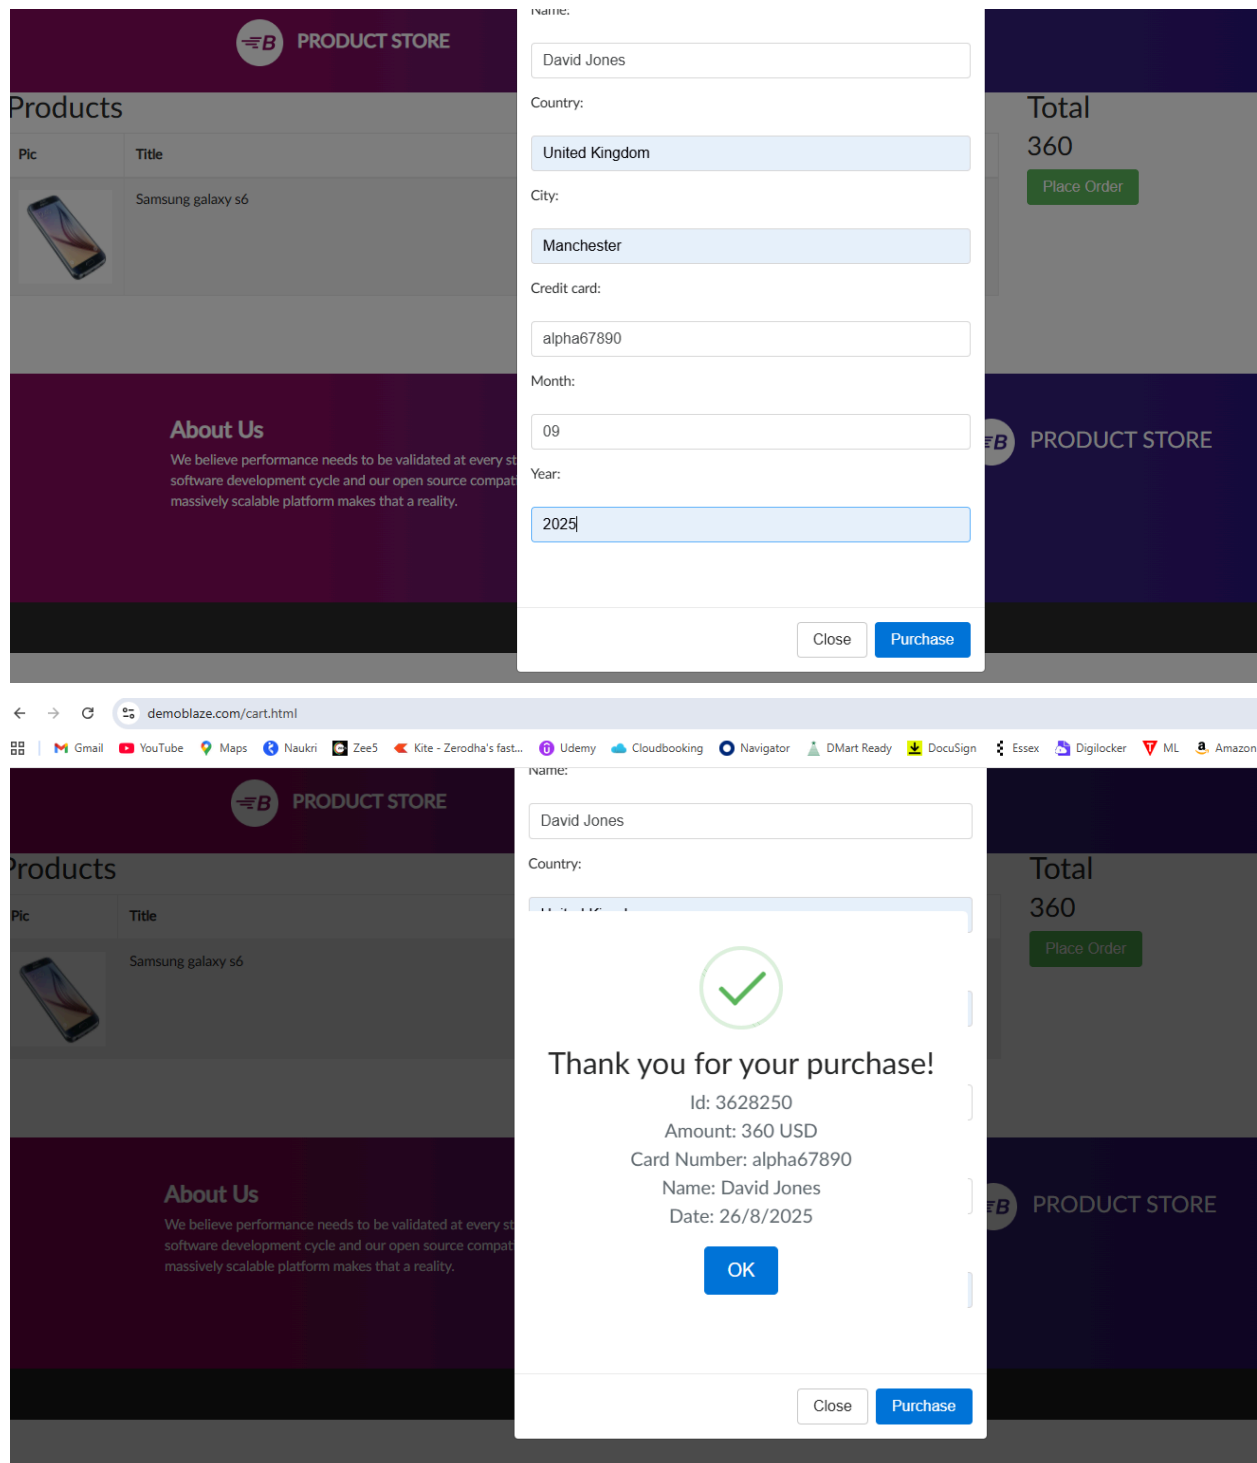

**Adjustment:** This functionality should not to br tried unless the earlier bug was fixed.

## Bug 4:

Actual Behaviour: Credit card field accepting alphanumeric characters.

Expected Behaviour: Credit card field should accept only 16 digit numerical value.

**Adjustment:** Validation check need to be implemented for the respected field which should be well documented in the requirement document.
